Satara, Maharashtra

Key skills

- Postman
- J-Meter
- SQL
- Agile, Scrum
- Python, JavaScript
- Automation Testing

Area of Interest

- **SQL & DBMS**
- **Data Analyst**

Education

(BCA) Bachelor Computer Applications

Krishna Institute of Science & Technology
2015-2018

Certifications

Agile Tester (CTFL-AT)

ISTQB | Aug 2019

Advance Software Test Specialist

Squad. InfoTech pvt Ltd | Aug 2019

TestDome (SQL)

Test Dome | Mar 2022

Google Analytics Fundamental Concepts

Google | NOV 2022

Summary

Dedicated Test Engineer with 5 years of experience in ensuring the quality and functionality of software applications. Proficient in designing, implementing, and executing test strategies, including manual and automated testing processes. Skilled in using industry-standard tools such as Postman for API testing and developing automation scripts in Python and JavaScript. Experienced in Microsoft SQL for database management, server configuration, and setup. Proven ability to generate detailed test reports and provide valuable insights through data analytics. Seeking to leverage expertise in testing methodologies and technical acumen to contribute effectively to software development teams.

Career history

• **Sr. Software test Engineer**

Mastek, Mumbai, MH | Mar 2022 – June 2024 (2yr 5 Month)

Client – IPF (International Personal Finance), UK

- Developing and maintaining automated test scripts to increase test coverage, improve efficiency, and shorten the testing cycle. Integrating automated tests into continuous integration/continuous deployment (CI/CD) pipelines.
- Creating detailed, comprehensive test plans, test cases, and test scripts that cover all aspects of software testing (functional, non-functional, regression, performance, etc.). Executing tests manually or using automated testing tools and frameworks.
- Using tools like Jira to report and track defects, working closely with developers to resolve issues.
- Conducting performance and load testing to assess system performance under various conditions and identify bottlenecks. Analyzing test results and providing recommendations for improvements.

• **Software Test Engineer**

Mastek, Mumbai | Jan 2021 – Apr 2022 (1yr 4 Month)

Client – IPF (International Personal Finance), UK

Key responsibilities

- Performing manual testing to identify bugs, defects, and usability issues in software applications.
- Using tools like SoapUI and Postman to test APIs for functionality, reliability, performance, and security.
- Using tools like Jira to report and track defects, working closely with developers to resolve issues.
- Testing each function of the software application against the functional requirements to ensure it behaves as expected.
- Collaborated in team-based, agile environment following daily scrum meetings to accomplish objectives by deadlines.
- Developed code on analyzed requirements and understanding of industry technical standards.

- **Software Test Engineer**

Black Box, Mumbai | Mar 2019- Jan 2021 (1yr 11 month)

Responsibilities: -

- Proficiency in creating and executing test cases, conducting manual and system testing, and utilizing tools like SoapUI and Postman for API testing.
- Familiarity with Jira for project management and defect tracking, ensuring comprehensive coverage through sanity and database testing.
- Experience in functional testing under agile methodologies, ensuring software quality and timely delivery.
-

Skills: Deployment, Unit Testing, GitHub, Dot net, Angular

- **Junior software Engineer**

Black Box, Mumbai | Aug 2018- March 2019 (8 Month)

Responsibilities: - Working closely with senior developers, designers, and other stakeholders to deliver high-quality software. Using tools like Git for version control, branching, merging code changes, and collaborating with other team members. Deploying applications to various environments (development, staging, production)

Skills: Deployment, Unit Testing, GitHub, Dot net, Angular
